2017 CERTIFICATION

Consumer Confidence Report (CCR)

Silven Water Association

130015	130014,	130017.	130023

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH. Please check all boxes that apply.

Customers were informed of availability of CCR by: (Atta	ich copy of publication, water bill or other)

CCR Deadline to MSDH & Customers by July 1, 2018!

Siloam Water 2017 Drinking Water Quality Report

Is my water safe?

Last year, as in years past, your tap water met all U.S. Environment Protection Agency (EPA) and Mississippi State Department of Health drinking water standards. This report is a snapshot of last years water quality. Included are details about where your water comes from, what it contains and how it compares to standards set by regulatory agencies. We are committed to providing the best information about the quality of your drinking water.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791

Where does my water come from?

Our water comes from 8 different wells that draw from the Eutaw, Gordo and McShan Aquifers.

Source water assessment and its availability:

Our source water assessment is available on request.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791

How can I get involved?

Our board members meet the 2nd Monday of every month at 5:00 pm at the Siloam Water Office.

Our annual meeting is the 1st Monday in April. The exact time and place will be printed on your water bill. This is a very important meeting and we encourage all of our members to attend.

Additional Information	If present, elevated levels of lead can cause serious health problems, especially
on Lead	for pregnant women and young children. Lead in drinking water is primarily from
	materials and components associated with service lines and home plumbing.
1	Siloam Water Association is responsible for providing high quality drinking water,
l	but cannot control the variety of materials used in plumbing components.
1	When your water has been sitting for several hours, you can minimize the potential
	for lead exposure by flushing your tap water for 30 seconds to 2 minutes before
1	using water for drinking and cooking. If you are concerned about lead in your
1	water, you may wish to have your water tested. Information on lead in drinking
	water, testing methods and steps you can take to minimize exposure is available
	from the Safe Drinking Water Hotline or at http://ww.epa.gov/safeater/lead
	The Mississippi State Department of Health Public Health Laboratory offers lead
	testing for \$10.00 per sample. Please contact 601-576-7582 if you wish to have
	your water tested.

Term	Definition
PPM	parts per million, or milligrams per liter (mg/l)
PPB	parts per billion, or micrograms per liter (ug/l)
MCL-Maximum Contaminant Level	The highest level of a contaminant that is allowed in
	drinking water. MCLs are set as close to the MCLGs as
	feasible using the best available treatment technology
MCLG-Maximum Contaminant	The level of a contaminant in drinking water below which
Level Goal	there is no known or expected risk to health. MCLGs
	allow for a margin of safety
	A required process intended to reduce the level of a
	contaminant in drinking water
TT- Treatment Technique	The concentration of a contaminant which, if exceeded,
	contaminant in drinking water
AL- Action Level	The concentration of a contaminant which, if exceeded,
	triggers treatment or other requirements which a water
	system must follow
MRDLG- Maximum Residual	The level of a drinking water disinfectant below which
Disinfectant Level Goal	there is no known or expected risk to health. MCLGs
4	do not reflect the benefits of the use of disinfectants to
	control microbial contaminants.
MRDL-Maximum Residual	The highest level of a disinfectant allowed in drinking
Disinfectant Level	water. There is convincing evidence that addition of a
l	disinfectant is necessary for control of microbial
	contaminants.
